Remove your glasses or contacts (unless you wear readers over contacts).

Hold this paper 16 inches away from your eyes

Start reading from the top line and proceed down until you reach the last line that is clear

The (+) strength or power that is written next to this line will be your recommended reading power.

The most common reading distance is about arm’s length (16 inches). If your reading distance is nearer than 16 inches add 0.50 D to the indicated power. If your reading distance is farther than 16 inches subtract 0.50 D from the indicated power.
